

Personalized Cards Plugin

Complete User Manual · Administrator Guide

What's Covered in This Manual

01 Initial Setup

Upload templates, fonts & configure the plugin

02 Settings

Text overlay, email, wallet & QR configuration

03 Managing Members

User profiles, subscriptions & CSV bulk import

04 Creating Cards

Single cards, bulk actions & editing

05 Member Frontend

What members see on the My Card page

06 Emails

Card delivery, renewal & 30-day reminders

07 Activity Log

Track every action in the system

08 Settings Backup

Export & import plugin configuration

01 — Initial Setup

First steps after activating the plugin

WHAT YOU NEED BEFORE CREATING CARDS

Front Card Template (JPG)

Go to Settings → Upload Card Template.
Upload a blank JPG card design. Text and photos will be overlaid on top.

Back Card Template (JPG)

Go to Settings → Upload Card Back Template.
Optional. No text is printed on the back — it's used as-is.

Font File (TTF)

Go to Settings → Upload Font.
Upload a TrueType font (.ttf). This font is used for all text on the card.

After Upload

- Go to Settings → Card Template & Text Layout
- Select your uploaded template as the Active Template
- Use the visual preview to click on the card image and find X/Y coordinates for each text field
- Adjust position, font size and colour for: Member Name, Father Name, Sport, Member ID, Expiry Date, Member Photo
- Click Save Settings

02 — Settings: Text Overlay & Card Layout

Personalized Cards → Settings

CONFIGURABLE FIELDS

Field	Description
Member Name	Name printed on the card
Father Name	Father's name
Sport	Member's sport/discipline
Member ID	Custom or WP user ID
Expiry Date	Format configurable (e.g. d/m/Y)
Member Photo	X, Y, Width, Height
QR Code	Reserved — disabled for now

TIPS

Click the preview image

Click anywhere on the template preview to get exact pixel coordinates (X, Y) for that spot.

Scale awareness

The preview is scaled down. Coordinates are automatically converted to actual pixel values.

Expiry format

Use PHP date format strings: d/m/Y → 31/12/2027 · F j, Y → December 31, 2027

Change template live

Changing the Active Template dropdown instantly updates the preview — no save needed.

03 — Managing Members

Users → Edit User → Personalized Cards section

INDIVIDUAL MEMBER SETUP

Activate Membership

Check 'Active Member'. The member gains access to the My Card page and their card can be created.

Set Expiry Date

Pick any custom date in the Expiry Date field. A renewal confirmation email is sent automatically when the date changes.

Father Name

Stored as user meta. Used on the card if not overridden at card-creation time.

Sport

The member's sport or discipline, printed on the card.

Member ID

Custom ID shown on the card. Defaults to WP user ID if left blank.

Member Photo

URL of the member's photo. Use the Choose Image button to pick from the Media Library.

03 — CSV Bulk Import

Personalized Cards → Import Users

CSV COLUMNS

Column	Required	Description
email	✓	User email address
display_name	—	Full name shown on site
first_name	—	First name
last_name	—	Last name
father_name	—	Father's name for card
sport	—	Sport / discipline
member_id	—	Custom member ID
expiry_date	—	Format: YYYY-MM-DD
member_image	—	Photo URL
password	—	Auto-generated if blank

HOW IT WORKS

1

Prepare CSV

First row = header. Use the Download Sample CSV button to get a ready-to-fill template.

2

Choose options

Check 'Activate Membership' to mark all imported users as active. Optionally send a WP welcome email.

3

Upload & Import

Select your .csv file and click Import. The system processes each row one by one.

4

Review results

A per-row table shows: Created, Updated, Skipped, or Error with details for each email address.

Existing users (matched by email) have their meta updated — they are not duplicated.

04 — Creating Cards

Personalized Cards → Dashboard

Create Single Card

- Select a member from the dropdown (only active members shown)
- Optionally override: Name, Father Name, Sport, Member ID, Photo URL
- Tick 'Send Email' to email the card immediately
- Click Create Card — front + back are generated automatically

Bulk Create & Email All

- Click 'Create & Email All Active Members'
- Members without a card get one created
- All active members receive their card by email
- Skipped count shows members who already had a card

Re-email Existing Cards

- Click 'Re-email Existing Cards' in the Bulk Actions section
- Sends emails only — does not create new cards
- Useful after template or content changes
- Front and back are both attached to the email

Edit Card: In All Cards or Recent Cards, click Edit on any row → adjust fields → optionally regenerate the image → Save.

05 — Member Frontend

The [pc_my_card] shortcode

[pc_my_card] • [pc_login]

These shortcodes are automatically added to two pages created on plugin activation: My Card and Member Login.

Front Card Image

Member sees their latest card at full width with a download button.

Back Card Image

If a back template is configured, it is displayed below the front.

Expiry Notice

Shows days remaining. Turns to 'EXPIRED' overlay when past the date.

Download Button

Disabled automatically when membership is expired.

Google Wallet

Add to Google Wallet button appears when enabled in Settings.

Previous Cards

If the member has multiple cards, older ones appear in a grid below.

Auto Deactivation

If a member visits after expiry, their status is set to inactive silently.

Login Redirect

Non-logged-in users are redirected to the Member Login page automatically.

06 — Email System

Three automated emails keep members informed

Card Delivery Email

Triggered manually

- Sent when creating a card (if 'Send Email' is ticked)
- Also triggered by Bulk Create & Email or Re-email buttons
- Card front + back are both embedded AND attached as files
- Google Wallet link included when enabled
- From name, from email, subject & body all configurable in Settings

Renewal Confirmation

Automatic on

Automatic on expiry date change

- Fires when admin saves a member profile with a new expiry date
- Only sends if the member is active AND the date actually changed
- Tells the member their new expiry date clearly
- Logged to the Activity Log as 'renewal_confirmation_sent'

30-Day Reminder

Automatic — daily cron

- Runs every night at midnight automatically
- Finds members whose expiry is exactly 30 days away
- Sends a friendly reminder to contact admin for renewal
- Each member receives this only once (tracked per user)
- Also auto-deactivates members whose expiry has passed

07 — Activity Log

[Personalized Cards](#) → Activity Log

Every important action is recorded here with timestamp, user and details.

Action	Description
 Card Created	A new card was generated for a member
 Card Emailed	A card was sent by email
 Card Edited	Card data or image was updated via Edit
 Card Deleted	A card record was removed
 Membership Expired	Auto-deactivated by the nightly cron
 Renewal Reminder Sent	30-day reminder email was dispatched
 Renewal Confirmed	Expiry date updated and member notified
 CSV Import	A bulk import was completed

Filter by action type using the dropdown. Use [Clear Log](#) to reset. Shows last 200 entries.

08 — Settings Export & Import

Personalized Cards → Settings → bottom of page

Export Settings

What is exported:

- All text field positions (X, Y, size, color)
- Active template & back template names
- Font file selection
- Email settings (from, subject, message)
- Wallet settings (Google Wallet issuer ID)
- QR code configuration
- Expiry date format

Does NOT export template/font/certificate files — only the configuration values.

Import Settings

Step 1 Export settings from your source site (staging or old install)

Step 2 Go to Settings on the target site

Step 3 Scroll to 'Import Settings', choose the .json file

Click Import Settings — all configuration is restored

Existing settings on the target site are overwritten. Template & font files must be re-uploaded separately.

Quick Reference

Upload template

Settings → Upload Card Template

Upload back template

Settings → Upload Card Back Template

Set field positions

Settings → Card Template & Text Layout (click preview)

Activate a member

Users → Edit User → Active Member ✓ + Expiry Date

Create one card

Dashboard → Create Card for Member

Create all cards

Dashboard → Bulk Actions → Create & Email All

Edit a card

Dashboard / All Cards → Edit button

Import users from CSV

Import Users → Upload CSV

View activity

Activity Log

Backup settings

Settings → Export / Import Settings
